Interview 1 Student with a Tight Class Schedule

- Behavior: Had only 35 minutes between classes and chose the food court because it was closer.
- Behavior: Encountered a long line and bought a packaged sandwich instead of the preferred meal.
- Opinion: Prioritized time over food choice and was willing to compromise on the meal.
- Behavior: Usually does not research familiar dining locations. Uses the university dining website to check hours and maps to estimate walking distance.
- Behavior: Sometimes visits a location without confirming service because checking takes additional time.
- Behavior: Visited a cafe that was open after its kitchen had stopped serving. The unsuccessful trip took about 12 minutes, and the student went without eating.
- Opinion: Considers university information more trustworthy than map listings when operating hours conflict.
- Opinion: Would consider a new tool if it helped avoid unsuccessful trips and find food within a short break.
- Key finding: Limited time can lead students to accept less desirable meals or visit without confirming service. Location hours alone may not provide enough information for a successful dining decision.

Interview 2 Student Balancing Budget and Dietary Preferences

- Behavior: Selected a vegetarian bowl shown online but found it sold out upon arrival.
- Behavior: Went off campus for an alternative, walked farther, spent about $4 more, and used most of the break.
- Opinion: Prioritized a suitable, filling meal over price and convenience.
- Behavior: Checks menus and compares prices before choosing where to eat.
- Behavior: Asks employees for clarification when ingredient information is unclear.
- Behavior: Chose a different meal when an online menu did not list the ingredients in a sauce.
- Behavior: Asked an employee to resolve conflicting descriptions of a menu item.
- Opinion: Would consider a new tool that provided accurate ingredient information and current food availability before walking to a location.
- Key finding: Scheduled menus and incomplete ingredient descriptions can leave students unable to confirm a suitable meal. The consequences may include additional spending, walking, and lost break time.

Interview 3 Student Who Prefers Familiar Routines

- Behavior: Usually visits a familiar cafe after class because it is already along the student’s route.

- Behavior: Does not check online before regular visits and chooses from the food available upon arrival.
- Opinion: Prioritizes convenience and minimal effort over finding a particular item.
- Behavior: Uses maps to check directions and hours when visiting an unfamiliar location.
- Behavior: Was unsure about school-break hours but walked past the cafe anyway because it was on the way.
- Behavior: Found no pastries available on one visit, bought coffee, and ate food from their bag.
- Opinion: Considered the unavailable pastries a minor inconvenience.
- Opinion: Trusts date-specific campus announcements more than regular map hours for holiday or school-break schedules.
- Opinion: Might use a new tool to check a specific item or unusual hours, but probably would not check it before every visit.
