Interview 1) Student with a tight class schedule

- Only 35 minutes between classes; chose the food court because it was closer.
- Long line → bought a packaged sandwich instead of a preferred meal.
- Main priority: time; willing to compromise on food choice.
- Usually doesn't research familiar places. Uses university dining page for hours and maps for walking distance.
- Sometimes goes without confirming service because checking takes time.
- Cafe was open but kitchen had stopped serving → wasted about 12 minutes and missed eating.
- Trusts University information over maps when hours conflict.
- Would use a new tool if it helped avoid wasted trips and find food within a short break.

Interview 2) Student balancing budget and dietary preferences

- Wanted vegetarian bowl shown online; sold out upon arrival.
- Went off campus → farther walk, about $4 more, used most of the break.
- Main priority: suitable, filling meal; compromised on price and convenience.
- Checks menus and compare prices before choosing.
- Ask employees when the ingredients are unclear.
- Missing sauce ingredients online leads to choosing a different meal.
- Conflicting menu descriptions needed employee confirmation needed.
- Would use a new tool for accurate ingredients and current food availability before walking over.

Interview 3) Student who prefers familiar routines

- Usually visits a familiar cafe after class; already on route.
- Doesn't check online before regular visits; choose from what is available.
- Main priority: convenience and minimal effort.
- Uses maps for directions and hours when visiting somewhere new.
- Unsure about school-break hours → walked past anyway because it was on the way.
- No pastries available once → bought coffee and ate food from bag; minor inconvenience.
- Trusts date-specific campus announcements over regular hours on maps.
- Check out a new tool for a specific item or unusual hours, probably not for every visit.
